(54) **Radio communication apparatus in CDMA communication system with calibration**

(57) In a CDMA radio communication system including a plurality of transmit radio sections, calibration signals with a bandwidth equivalent to that of spread spectrum signals used for communications are generated in base band processing sections. These calibration signals are input to transmit radio sections that convert the spread spectrum base band signals to radio signals. Then, the characteristics of the transmit radio sections are detected from the calibration signals that have passed through the transmit radio sections.

COMMUNICATION

The European Patent Office herewith transmits

- the European search report
- the declaration under Rule 45 EPC
- the partial European search report under Rule 45 EPC
- the supplementary European search report concerning the international application under Article 157(2) EPC relating to the above-mentioned European patent application. Copies of the documents cited in the search report are enclosed.

The following specifications given by the applicant have been approved by the Search Division :

Abstract

Title

Figure

The abstract was modified by the Search Division and the definitive text is attached to this communication.

The following figure will be published with the abstract, since the Search Division considers that it better characterises the invention than the one indicated by the applicant.
